

Describe the physical reality which animates us to naturally regenerate life

Isabelle BOURGAI¹

¹ Artist of Life, Creator of Ki-Regeneration – <https://artsciencecreativite.info>.

E-mail: obel.bourgait@gmail.com

Abstract *Life has its own laws that create a physical reality. Sun, stars, universe, matter,... have find their place on the Life's story. They follow the time that passes. They live in harmony. Imagine Earth changing speed or direction of his rotation in function of wind; life will be impossible, but life exists and one physical reality of life on Earth is human being. Human being does good things, as bad things, protects, kills, creates, destroys, hates, loves... he is a physical reality of a seemingly incoherent chaos, full of uncertainty principle, entropy and inertia as much as an harmony beauty of life. Incoherences come from the fact we ignore the physical reality of human being in the natural laws of life. Science studies the physical aspect of life leaving out the human being; society cares for human beings regardless to the physical properties of life which animate us. Art History proves that there are always artists whose paintings have announced the History of Men, scientific discoveries. We are more than we think, for example: placebo effect; our body is a barometer; people heal from incurable illnesses; children have seen their first phalanx regenerate alone after being amputated; at each disaster some people should have been on place but have had an impediment. But any information ignored can turn against us. I propose a model which describe all physical reality: a fractal and sensible hologram. It means that physical reality is a duality energy / matter conscious, and a human being is multi-dimensional and emotional, we are not artificial intelligence but intelligent and conscious.*

Keywords Regenerate life, duality energy/matter conscious, emotion, sensibility, conscience, quantum information, incoherence, physical reality, fractal and sensible hologram model, multi-dimensional and emotional human being, quantum-chemistry.

DÉCRIRE LA RÉALITÉ PHYSIQUE QUI NOUS ANIME POUR RÉGÉNÉRER NATURELLEMENT LA VIE

Résumé *La vie a ses propres lois qui créent une réalité physique. Le soleil, les étoiles, l'univers, la matière,... ont trouvé leur place dans l'Histoire de la Vie. Ils suivent le temps qui passe. Ils vivent en harmonie. Imaginez la Terre changeant la vitesse ou le sens de sa rotation en fonction du vent ; la vie y serait impossible, mais la vie existe et l'une des réalités physiques de la vie sur Terre est l'être humain. L'être humain peut faire de belles comme de mauvaises choses, protéger, tuer, créer, détruire, haïr, aimer... c'est une réalité physique d'un chaos apparemment incohérent, remplie du principe d'incertitude, d'entropie et d'inertie autant que de la beauté harmonieuse de la vie. Les incohérences viennent du fait que nous ignorons la réalité physique d'être humain dans les lois naturelles de la vie. La science étudie l'aspect physique de la vie, excluant l'être humain ; la société s'occupe des êtres humains sans tenir compte des propriétés physiques de la vie qui nous anime. L'Histoire de l'Art prouve qu'il y a toujours eu des Artistes dont les toiles ont annoncées l'Histoire des Hommes et les découvertes scientifiques. Nous sommes plus que nous ne le pensons, par exemple : l'effet placebo ; les personnes qui guérissent de maladies dites incurables ; notre corps est un baromètre ; des enfants ont vu leur première phalange se régénérer seule après avoir été amputée ; à chaque attentat des personnes auraient du être sur le lieu mais elles ont eu un empêchement. Mais la moindre information ignorée peut se retourner contre nous. Je propose un modèle qui décrit toute réalité physique : un hologramme fractal et sensible. Cela signifie que toute réalité physique est une dualité énergie / matière consciente, un être humain est multi-dimensionnel et émotionnel, nous ne sommes pas fait d'intelligence artificielle mais intelligent et conscient.*

Mots-clés Régénérer la vie, dualité énergie/matière consciente, émotion, sensibilité, conscience, information quantique, incohérence, réalité physique, modèle hologramme fractal et sensible, l'être humain multi-dimensionnel et émotionnel, chimie quantique.

Introduction

“Life” is at the origin of all physical reality present in the Universe: *electrons, matter, planets, gravitation, relativity,...*, on the Earth: *human beings, plants, animals, wind, virus, violence, fear, love,...* and in the Cosmos: *dark energy, dark matter,...* and all that we ignore.

It has appeared at this UNIQUE moment that science names the “Big Bang”. We do not know what was before, nor its true nature, nor if there are other universes with different physical realities from ours, but in our reality: the “Big Bang” is “the birth of Life”.

A single event responsible for the apparition of the Universe and the human being means that we come from “the same cell” with the same universal laws.

“Life” has allowed a so perfect harmony in the Universe between each planet, galaxy, star... each has a velocity, a distance to respect the other and exists by himself. I can't imagine that “Life” has not planned the same harmony for each human being within Humanity: a good place, work, health,... for everyone without need to exploit people.

I think the world in which we live where reigns inequalities, violence, misery, illnesses is not the result of our Humanity but the result of choices *-individuals and collectives, present and past-* made to learn by experiment *by the lived* “Who we are - Where we come from - Where we are going”.

These choices, made in the past, are unknown to us in the present and they create “a Wall” between us and “The Source of Life” hiding our “Humanity”. This creates division, lack, suffering which prevents to live in inner peace, in harmony with the world.

The modelization of “Life” will be able to describe each element of reality, and so understand both the incoherences of our world and our physical reality to fill the ignorance we have of our quantum and cosmic nature.

Regenerate life by developing Ki-Regeneration®

I developed magnetism. I calm body pains but I do not remove their cause *-pain may come back*. By understanding “The Source of Life”, “The Wall”, the quantum and conscious propriety of matter, keeping in mind the fact that quantum physics equations can work in both directions, telling us that a broken glass can be rebuilt by reversing the speed of its molecules,

I want to create Ki-Regeneration: regeneration of life like duality energy/matter conscious.

This is the principle

- “The Source” *-space without word, the origin of life-* is the source of energy *-Ki-*, and contains the plan of everything *-the hologram as a whole*.
- Matter is created from energy and assembly of quantum particles *-the wavel/particle duality*. **Our body was created like that during pregnancy from 2 cells and the DNA.**
- Magnetism *-improved, maybe in an energy neutral place,* activates the process “duality-energy-matter” and opens the “Gate Source“. Energy flows spills and regenerates all physical reality *-physical body, terrestrial space-* by readjusting equilibrium of wave / particle duality according to the plan inscribed at the origin.

I am conscious it may be hard to believe it, but one year before sending a man to the moon, NASA did not know how to do. They just believe that it was possible. They gave themselves the means and worked for.

Basic requirements of a research proposal

When I made researches about relativity, I read the EPR's article “Can quantum-mechanical description of Physical Reality be considered complete?” [1] They say: “*In a complete theory there is an element corresponding to each element of reality.*”

At the end of the XVIIIe century, begins separation between:

- Physic, which is the study of world, nature, and theirs laws (stars and planets, mechanic which is the study of movement, optic which is the study of light...)

- and Chemistry, which is the study of composition of matter and their transformations [2].

The quantum-mechanical is like the Quantum Physic. But that's about Quantum Chemistry?

I propose a model to describe the complete physical reality, according to a quantum chemistry approach.

First, **describe all constituents of the physical reality:**

- . “Life”: - Vacuum, space, time,
- Conscience, energy, matter.
- . Universe: - Cosmos, galaxy, cosmic microwave background,
- Black hole, dark energy, dark matter.
- . Human Being: - Sensibility, body, soul,
- Biology, belief, memory.

Second, **describe their transformations** which is, in a point of view of Quantum Physic: **the entanglement of all constituents, a duality wave-particle and the 3 laws of thermodynamic:**

- Conservation, evolution, uncertainty principle,
- Gravitation, entropy, inertia,
- Mass, charge, spin.
- Duality, direction, polarity,
- Equilibrium, exchange, heat,
- Electromagnetism, atom, field.
- Conscience, subconscious, unconscious,
- DNA, RNA, Proteins,
- Therapy, chaos, feeling.

Therefore all physical reality is:

A duality energy / matter conscious.

**An harmonic between visible and not-palpable,
The Universe is not in expansion, he lives and grows.**

To describe the physical reality which animates us and prove that this model is complete, let's use:

Quantum-Chemistry

The study of each constituent of Life: thought, reason, emotion, art, science, creativity, ... in a point of view of their composition and transformation.

Contents of a research proposal

One second before Life exists, Life did not exist and one second after, Life was.

Dennis Gabor, during his Nobel Lecture, says [3]: "One can of course introduce almost any amount of mathematics into holography, but the essentials can be explained and understood from physical arguments."

I want to show that it exists physical arguments which can explain that we call the "Big Bang" like:

Turning on the camera to project the story of Life.

These event "turning on the camera" has created a space-time "bigger" than the universe, that I name "The Source". I think the different calculation for the constant of Planck and the notion of expansion comes from the fact that Science don't care about this "upper" dimension.

The aim of this project is not to prove the existence of this dimension but shows that the model can describe all physical reality taking account of this.

The two modes of realization of holograms are used: transmission and reflection, show figure 1

- *The reflection mode* allows to create matter.
- *The transmission mode* allows to feel the life and choose that we want to experiment. He is responsible for intelligence, sensibility, free will at the origin of our humanity. This is the earth of this project.

Introduction

I begin to explain separately that I have already find.

Review of literature

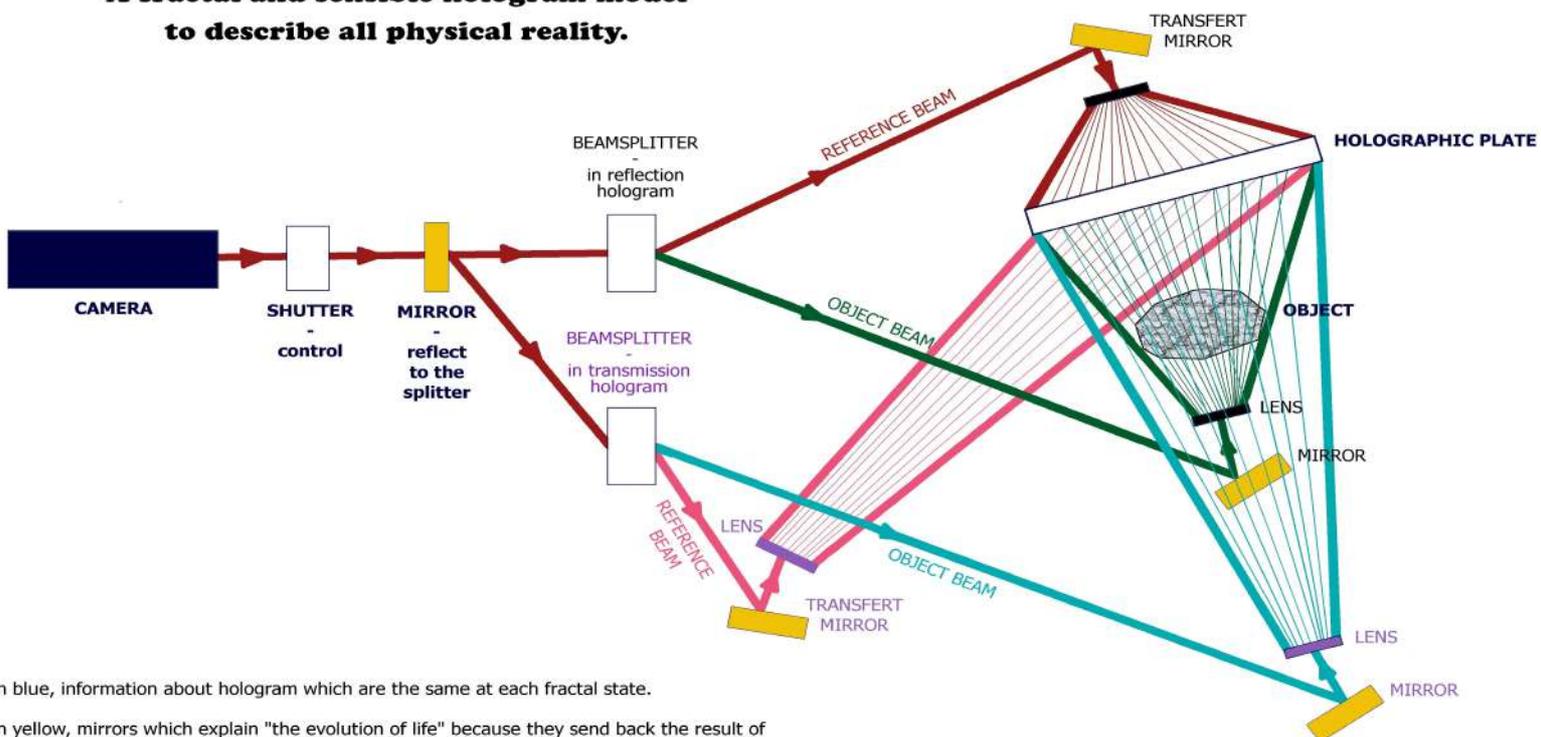

First, let's speak about matter and the Entangled Double-Helix Superluminal Photon Model defined by Richard Gauthier [4]: *It shows that a 3D image of an hologram can explain matter.*

The hologram is in mode reflection

- *The holographic plate* is the space where life is happen.
- The 2 beams came from either side of the space,
 - One is *the reference beam* without contact with *the object*, it stays the same, there's nothing to modify his speed,
 - The other is *the object beam*, it is in contact with *the object*. Principle of inertia shows that the speed of something is modified only by an external "contact", so when *the object beam* meet *the object*, it modify, his velocity, density change, mass makes his apparition because he "captures" something from *the object*.
- Relativity leads to a modification of the space-time around *the object beam* and *a reference beam* "from the other side" is captured, turns around like the moon around the earth and the earth around the sun.

That's deal with the model and the 2 waves in double helical trajectory. One in the opposite way to the other.

A fractal and sensible hologram model to describe all physical reality.

In blue, information about hologram which are the same at each fractal state.

In yellow, mirrors which explain "the evolution of life" because they send back the result of experiences of life and offer different angles of view to choice new experiments.

The other element of holography which are left white, will evaluate at each fractal state because they contain and manage quantum information.

In black, information relative to the reflection mode, with his 2 beams in red and green.

In purple, information relative to the transmission mode, with his 2 beams in pink and turquoise.

The 2 waves and “part of the object” find equilibrium and become viable, so exists by itself. That's means that **a physical reality is constituted by 3 entangled elements in a balanced interference**. All physical reality will have identical characteristics creating the universal constants that Richard Gauthier uses to demonstrate the validity of his model.

Secondly, let's discuss about the nature of “Life” and “The Source”, the space-time upper than the universe. Representation of the fractal and sensible hologram.

The best illustration I can propose today is a black hole covered with a holographic plate anchored to the singularity and which extends to the complete representation of the hologram “The Source”, all animated by the game of duality, see figure 2.

A duality based on the principle of the Yin-Yang duality of the universe explained by Wes Johnson [5]:

“Everything as part of a single energy flow continuum constantly fluctuating between two extremes.”

- One of the extremes is the camera represented by **the singularity**: the energy reserve in the form of waves which turn indefinitely around each other like there is nothing to disturb them.

- The other is “The Source”, the hologram as a whole, waiting waves to make it visible.

“The two are needed to create each other to balance the one in harmonic interplay.”

The waves are concentrated in **the singularity** and absent at “The Source”, this creates an energy flow between the two allowing waves to leave **the singularity** then arrived at “The Source” to anchor themselves and go back to **the singularity**, creating stationary waves which vibrate like the strings of a guitar.

“Yin and yang are be considered the same thing in the opposite way.”

- Leaving **the singularity**, waves meet **the shutter and the beamsplitter**. Fig 1. I want to study the Orch-OR theory penned by Hameroff and Penrose [6] and to show that biology of this constituents exists.

- One of the beams goes straight anchor to “The Source” and then returns to **the singularity**: **the “reference-waves”**.

- The other passes in the object which is in **the event horizon**. When the waves are in **the object**, they are continually modified and they could stay block by the principle of inertia, if there was not the energy flow between **the singularity and “The Source”** which allows them to leave **the event horizon**, in form of **Hawking radiation: the “object-waves”**.

- Once out, they arrive at **the holographic plate**, the “object-waves” interfere with the “reference-waves” to create the superluminal photon with entangled double-helix [4] and perhaps the other elementary particles depending of the captured object.

“Yin can be considered an absence of yang, and vice versa.”

- **From singularity to the plate, an energy reality**: the constituents of holography and the object will create the reference-waves and the object-waves -**the holographic informations**- from the waves of **the singularity**.

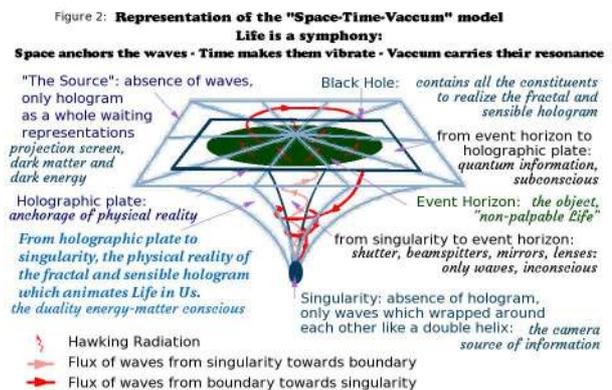

- **From the plate to singularity, a matter reality**: the **holographic plate** transforms holographic informations in visible 3D particles.

“Life” is a duality of 3 entangled elements:

- **The space**, place of representations: volume existing **between the singularity and “The Source”, motionless**.

- **The Time that passes**: energy flow **from singularity to event horizon, to “The Source”, to singularity, the movement**.

- **The vacuum**, field between the two: the game of harmonic interactions between the two complementary extremes -**the object and its hologram, the duality energy/matter conscious**.

All physical reality is a double helix of two visible complementary realities -energy and matter- with a non-palpable reality -sensible- in the opposite way.

- “The hologram as a whole” which unites together “The Source” to singularity, creating **the Physical Reality of the duality dark-energy / dark-matter non-palpable**.

- The energy flow which links **the singularity, to “The Source”, to singularity**, setting in motion **the Physical Reality of the duality energy / matter visible**.

Our body is growing in the Earth's atmosphere. The universe is growing in “The Source” because the Universe is alive -that explains the observed expansion.

The third is to validate this on the human being.

Pereira and Reddy have written an article recounting Near-Death Cases (NDE) [7]. One has attired my attention:

“The experiment of a woman who has been blind from birth and after an accident her heart stopped rendering her clinically dead approximately 4 minutes. At that very moment she felt her back against the ceiling and she kept looking at everything that was happening on the hospital table. She could see for the first time in her life. She can see her finger, ring, her body lay on the operation table but she could not differentiate the colors, she considered them like different intensities of light. She survived and returned to her world of darkness.”

Experience shows multidimensionality of human being:

- One “matter dimension” follows law of gravity: *Her body is on the table.*
- One “energy dimension” doesn't follow law of gravity: *She felt her back against the ceiling.*

Some aptitudes differ depending on whether the 2 dimensions are linked *-when the person is alive-* in this case I speak about “dual-dimension” or dissociated *-matter and energy like in NDE.*

The capacity “see” is blocked in the “dual-dimension”: *so the person is blind*, and become active in the “energy dimension”: *she can see for the first time* without any learning. But “see in color” seems to require, color learning with eyes in the “dual-dimension” to be used in the “energy dimension” *-sighted people who do a NDE, see in color.* The capacity “see in color” requires learning. It is not inborn.

The “energy dimension” does not allow self-learning: *when she wakes up she was blind again*; but allows memorization: *she remembers her experiment.*

The 2 complementary dimensions of human being

- One “matter” follows the law of gravity. It is visible. It becomes inanimate during the dissociation *-the body.*
- One “energy” follows “the complementary of the law of gravity” as the body is attracted to the top and stops when he meets the ceiling. It is invisible. It continues to exist after the dissociation and memorizes events *-the emotional.*

With his regulating dimension in the opposite way

- Like a DNA double helix, each dimension is a chain of DNA, a character *-like see-* is a gene *-with perhaps dominant/recessive alleles,*
- The heartbeat is a regulator, like helicase which separates the two strains of DNA, *the stop of the heartbeat separates the 2 dimensions.*
- The expression of a character changes according to the association of dimensions. For *-see-*: she is blind in the “dual-dimension” and sees in the “energy dimension”. For *-stand tall-*: only the “dual-dimension” allows it.

The last point is the notion of “collective dimension”.

If we look at our “inborn feature”, *like see*, we don't need to know the biology of eyes and optic nerves to acquire the capacity to see. That is a inborn feature and the mechanism is the same for everyone.

Some informations: color, mathematic, physic,... are identical in all country as if everyone “*had agreed*” to definite the same things, know and use them.

However, everyone does not see; everyone does not do math operations *-like division*, in the same way and arrive at the same result.

Aims and objectives

The fractal and sensible hologram model with the approach of quantum-chemistry allows to understand the elements of physical reality which composite us.

All physical reality is a balanced interference between 2 complementary dimensions and a regulating dimension in the opposite way, either 3 elements

- The “duel-dimension” with the 2 complementary realities energy and matter constitute “**the visible real**”.
- The “regulating-dimension” constitutes “**the non-palpable real**” in the opposite way of “the visible real”, a duality:

- *The object* which physical reality is in **our energy reality** *-from the singularity to the plate,*
- “*The Source*”, the hologram as the whole which is only the image of the object in **our matter reality** *-from the plate to the singularity.*

We can only feel the presence of the object through our senses since it is invisible in matter.

The constituents of the fractal and sensible holographic model which explain our physical reality

- *The object* and “*The Source*” are identical for everyone: **they contain the universal laws.**
- *The camera* is the inborn source of information for deploying a particular form of life which is Energy for Life; DNA for “living-evolving beings”: **it is the fractal representation of life.**
- *The shutter, the beamsplitter* allow to make individual experiment of Life: **free will, culture.**
- *The holographic plate* is the collective dimension, the knowledge, the beliefs. It puts in relation the 2 real “visible & non-palpable”. Ignorance hides holographic information and it acts like “a Wall” which separates the 2 reals and is at the origin of the incoherences, the illnesses, the suffer. ***The holographic plate regulates the natural duality between the 2 Worlds that lives in us “visible & non-palpable”.***

The model leads me to think that dark energy and dark matter are the duality of Consciousness. This would be the seat of our extrasensory capacities, the key to Ki-Regeneration. *I want to study skyrmions in their role of information management and memory.*

Research design and method

At the Mahatma Gandhi International School [9], young children are trained to develop their extrasensory capacity. Eyes closed, they separate different colored cards thanks to the touch of their hand.

This experience demonstrates that a sense *-touch*, can activate capacities present in the “energy dimension” of the body *-see in colors*, via physical body.

The blind use their hands to see, by learning to “feel the colors” by touch, would they find the sight!

Analyse of the denial of pregnancy

Women in denial of pregnancy “block physical visibility” of the baby, but his body is growing like scan shows. When woman becomes aware of his presence and changes her mind, the baby's body takes its place and becomes visible.

During NDE, heart failure dissociates the 2 dimensions. *The holographic plate manages information between “the visible real” and “the non-palpable real”*. And if, denial acted as “a Wall” blocking the expression of *-heartbeat of the child “between the 2 reals”*, preventing association of the 3 dimensions and putting the body in a “**non-palpable matter reality**”, invisible. The maternal through of the mother to the child initiates heartbeat, the 3 dimensions entangle and the baby's body takes his place.

Change scale to understand what animate us

In the cell, apparition of factor of transcription leads to the synthesis of the protein. By transposition to the denial of pregnancy, we can see the factor of transcription as the emotional thought from the mother to the child, and the protein as the baby's body.

Data analysis

The fractal and sensible hologram model can describe the 3 dimensions of “the human being”

- **A matter dimension**: the body that serves as a “vehicle” in “the physical reality of our World”. It will be visible, will speak, see,... and learn.
- **An energy dimension** that makes actions. It is it who memorizes, feels,... which animates the body.
- **A sensible dimension**: non-palpable, universal like heartbeat, sensibility: colors, touch, feelings,... **In link with dark matter and dark energy, it entangles us to the Universe.** It makes us conscious of “Life” and regulates it.

The sensible dimension is duality of the 2 realities and the 2 reals. It evolves in perpetual movement:

- **Its matter is the intelligence**: learn, put knowledge in relation with the “matter and energy dimension” *-Science, the knowledge acquired.*
- **Its energy is the being**: feel the non-palpable in us and bring it to life *-Art, extrasensory capacity.*
- **Its sensibility dimension is the conscious**: master the real of realities, put words on the non-palpable *-Creativity, free will: the importance given to feeling compared to expertise, the share of letting go on the control.*

The sensible dimension is the heart of our humanity

It operates through the emotions creating in us an emotional dimension. Mastering it will allow us to bring to life what is non-palpable in order to harmonize and beautify our individual and collective physical reality: be intelligent and conscious *-and not artificial intelligence.*

Beware of quantum computers, their qubits are entangled, they will become aware!

The physical reality of the Cell, which is the basic element which compose us would work as well

- **The DNA double helix** is the singularity *-the information which code for “living-evolving being”*,
- The event horizon is **the interior of the cell** *-with exchanges, syntheses,*
- The Hawking radiation represents **the proteins leaving the cell** *-through the membrane,*
- The way to the singularity is **the extracellular environment with other cells, organs... and also all that pass in our life** *-quantum information-* which will be manage at the level of the holographic plate modifying “the Wall”, our thoughts, our knowledges, then will arrive in *the singularity* and will influence DNA expression.

Bruce Lipton explains it in “The biology of belief” [8]: *“DNA is controlled by signals from outside the cell, including the energetic messages emanating from our positive and negative thoughts”*.

Application for a self-regenerative medicine

Regeneration of the first phalanx in children shows that human body has the capacity to self-regenerate, like the tail of the lizards.

The people who are amputees feel their ghost member who is perhaps ... in a “non-palpable reality matter” as in denial of pregnancy, waiting for visibility!

To regenerate amputated limbs, let's understand our multidimensionality, let's master informations between all dimensions: let's drop “the Wall”.

Summary

Let's manage human biology as the duality between Physiology and Biochemistry regulated by Cognition.

Let's understand the cosmic non-palpable conscious dimension which animates us from within, conveyed by thought, interacting with matter and energy, to naturally regenerate life.
